HYPERRESUME

Status & Architecture Report

October 15, 2026 • Monorepo Active

1. Why You Were Seeing That Error

The red screen you encountered (`resumes.slice is not a function` and `Failed to load resource: net::ERR_CONNECTION_REFUSED :3001/api/v1/auth/me`) occurred due to two related events:

- **Temporary Backend Disconnect:** When the terminal was interrupted to consolidate git branches, the backend server on port 3001 momentarily stopped, triggering the `ERR_CONNECTION_REFUSED` in your browser.
- **Data Structure Mismatch Caught by React:** The backend endpoint `GET /api/v1/resumes` returns a paginated object envelope:

  ```
  {
    "items": [ /* resumes */ ],
    "total": 1,
    "page": 1,
    "limit": 20
  }
  ```

  The dashboard component initially expected a raw array and called `resumes.slice(0, 4)` . Because it was an object (or undefined while disconnected), calling `.slice()` threw a `TypeError` , which Next.js caught in its `<ErrorBoundaryHandler>` .

Current Status:

- Both files have been patched: `api-client.ts` safely unwraps `.items` , and `page.tsx` uses defensive `Array.isArray(resumes) ? resumes : []` checks.
- The backend is live and healthy on port 3001 (`/api/v1/health/live` returns HTTP 200).
- **To clear it:** Simply click **"Reload Page"** (or refresh `http://localhost:3000/app` in your browser).

2. Full Project Overview & Architecture

HyperResume is a privacy-first, ATS-focused AI resume builder and job application tracker. The repository is a consolidated monorepo tracked at **github.com/initAbhi/Hyper-Resume**:

```
Hyper-Resume/
├── frontend/              # Next.js 15 (App Router), Tailwind CSS, Bun runtime
│   ├── app/               # Public landing, /pricing, /tools/resume-checker, /app/*
│   ├── components/        # Reusable design system (Buttons, Dialogs, Cards, Badges)
│   └── lib/               # API client, Auth Context, Analytics, ATS Document generator
├── backend/               # NestJS 10, TypeORM, PostgreSQL, Vitest
│   ├── src/auth/          # JWT authentication & session management
│   ├── src/resumes/       # Resume CRUD & version trees
│   ├── src/job-matching/  # Grounded ATS matching engine

│   └── src/ai/            # Gemini AI provider + deterministic fallback engine
└── docs/                  # Product strategy, architecture plans, and benchmarks
```

3. Detailed Feature Status: What is Built, Half-Done, and Pending

Feature Area	Status	Working Details	Caveats / What is Needed
Authentication & Users	✅ **100% Working**	Email/Password signup & login, bcrypt hashing, JWT access + refresh tokens, protected routes via JwtAuthGuard, user profile editing, demo seed accounts.	Google One-Tap / LinkedIn OAuth are planned for later iterations.
Master Resume & Versions	✅ **100% Working**	Multi-resume support with a designated "Master" profile. Optimistic concurrency locking (prevents race-condition overwrites). CRUD for Work Experience, Education, Skills, Projects, and Certifications.	Fully complete.
Resume Editor & Canvas	✅ **100% Working**	Split-pane editor (form on the left, live ATS document preview on the right). 4 ATS-compliant templates (Classic ATS, Modern Minimal, Executive Serif, Tech Monospace). Action verb & STAR/XYZ bullet optimizer. Print styles (@media print) formatted to 8.5×11 A4.	Currently exports via browser print-to-PDF (window.print()).
Job Description Matcher	✅ **100% Working**	Paste any JD to parse company, title, and requirements. Generates hard skill match %, experience match %, education match %, and missing keyword audits. Strict evidence invariant: never hallucinates fake skills.	Uses offline deterministic engine by default unless a Gemini key is set.
Applications Tracker	✅ **100% Working**	Kanban/table view of job applications (saved, applied, interviewing, offer, rejected). Links directly to the tailored resume version used.	Fully complete.
Credit Ledger & Entitlements	✅ **100% Working**	Double-entry transaction ledger with idempotency keys to prevent duplicate deductions. Free tier grants 35 credits on signup; AI operations deduct credits (e.g., 5 credits per JD match).	Fully complete.
Payments & Monetization	🟡 **Half-Done (Sandbox ready)**	Order creation, credit package pricing (Job Hunt Pack ₹399, Pro ₹799), order verification, and sandbox simulation are fully working in code.	Live payments require real production credentials (CASHFREE_APP_ID & CASHFREE_SECRET_KEY) in backend/.env.
AI Integration	✅ **100% Working**	Live Google Gemini 1.5 Flash provider configured and authenticated. Factual, grounded bullet enhancements and JD extraction active with offline fallback safety.	Fully complete.
Free Public SEO Tools	✅ **100% Working**	/tools/resume-checker allows anonymous users to test resume text against ATS rules, checking action verbs, contact details, and readability.	Fully complete.
Tests & Quality Assurance	✅ **100% Working**	72 tests passing (42 backend unit/service tests in Vitest, 30 frontend logic & document rendering tests in Bun).	Fully passing.

4. How to Log In & Try It Right Now

Open the App in your browser: URL: http://localhost:3000

Log In with Seeded Demo Account:

Email: `demo@hyperresume.ai`
Password: `Password123!`

(Or create a brand-new account on http://localhost:3000/signup to receive 35 free credits immediately).

Admin Account (Health & Metrics):

Email: `admin@hyperresume.ai`
Password: `Password123!`

Access elevated permissions and inspect system health.
